# Genesis Prosthetic Arts

**Nasal/Nose Prosthetics  
by David Van Auker,  
MA, CP, CCA**

Creating individualized  
facial prosthetics  
one patient at a time!

Facial disfigurement due to accident or ablative surgery can't always be addressed with cosmetic or plastic surgery. When a prosthesis becomes an option, David Van Auker, MA, CP, CCA (owner of Genesis Prosthetic Arts) can work with the patient and the physician to provide personal care from pre-op consultation to the final brush stroke. Maxillofacial prosthetics is both an art and science that blends together for restoring the quality of life to the facially disfigured.

With over 30 years experience in anaplastology, David can work with patients and surgeons to create a personal treatment plan. He encourages involvement from the earliest point possible for each case. Genesis offers a more customized service for motivated patients looking for a more personalized prosthesis.

***It is an art and a science  
to make a good prosthesis!***

David works on his methods to strive for the best care available in the state. Silicone technology changes, with new materials that are more durable or may have improved bio-compatibility. He is constantly trying new ways to maximize outcomes. David is unique nationally as a board certified facial and limb prosthetist and collaborator with the International Centers of Excellence for the Advancement of Silicone Prosthetics and collaborator with international suppliers of facial prosthetics in product development and testing. This assures our patients access to many of the latest technologies and materials.

A current development for nasal prosthetics is improved animation and has been posted as a demonstration video on [www.premiumprosthetics.net](http://www.premiumprosthetics.net)

Services include:

- Nasal prosthetics
- Auricular prosthesis
- Ocular and orbital prosthetics
- Osseo-integrated implant systems including bar and magnetic retention
- Limb prosthetics for lower and upper extremities
